DIY Picture frame

Instructions No. 2946

Difficulty: Beginner

Working time: 1 hour

A personalised, homemade Christmas gift is always something very special. In these instructions, we'll show you how to make this great photo frame with little effort, which has space for several personalised photos or cards. A great gift idea for your loved ones!

DIY Designing a picture frame

First, glue **two blocks** together with the short side facing each other. Repeat this process. Then glue **three blocks** together with the short side and repeat this process.

You now have four wooden sticks. Glue the wooden sticks together so that they are the same length and face each other, creating the shape shown in our decoration example.

Making the suspension

Horizontal version: Use a ruler to measure the center of the top craft block (8 cm) and mark the position with a pencil.

Vertical version: Measure the center of the two upper craft blocks (8 cm) with a ruler and mark the spots with a pencil.

Repeat the process on the opposite sides and make the markings there too.

Drill a hole at the marked points with a **drill** and then sand the holes on both sides.

Thread a thread through the holes **cord** and knot it outside the frame so that the string is nice and tight. Now you can attach personal pictures or cards to the string with small **wooden clips** if you wish.
