Illuminated bottles with frost effect

Instructions No. 2629

Difficulty: Beginner

Working time: 2 Hours

These **bottles** look great and are very easy to make. The **frost-effect paint** creates a beautiful iced effect through which the light from the **fairy lights** shines through. Just the thing for the dark season!

This is how you design the light bottles:

First stick the **foam rubber stickers** onto the bottles.

Now dab the **bottles** with **frost effect paint**.

After drying, remove the foam rubber stickers. If frost-effect paint has run under the stickers, you can easily scrape it off with a bamboo skewer.

To make the paint last, you can bake it in the oven for 30 minutes at 160°C. After that, the bottle is hand-washable. Afterwards, the bottle can be hand-washed.

Now tie the **ribbon** around the neck of the bottle as decoration. Unwrap the wire of the **VBS Micro LED light chain** and place it in the bottle. Finally, place the bottle cork on the bottles.
