Simply combine casting and engraving

Instructions No. 1908

Difficulty: Beginner

Working time: 1 hour

Are you still looking for a beautiful **table decoration for** your confirmation **or** communion**?** The **self-cast stones** and fish can be designed according to your taste and then **personalized** with an engraving set. For example, the stones can be placed on the table as a name plate.

This is how the great decoration is made:

Stir the Keraflott **casting compound according to** the instructions so that a creamy mixture is formed and then fill it into the desired silicone moulds. In order to avoid the formation of bubbles, it is advisable to lift the mould immediately after pouring the casting compound and tap it lightly on a hard surface
Tip: The casting compound can be mixed with **VBS Colour Concentrate** colored. Simply add a few drops to the mixture and stir well

Allow your moulds to dry thoroughly and then release the poured stones and fish from the mould. You can now

colour the surfaces of your castings with watercolours as desired

Draw your desired motif or writing in advance and then work it **out** with the engraving pen.
