Wire Mesh Bell with Easter Arrangement

Instructions No. 1553

Difficulty: Advanced

Trendy Easter decorations are decorated with wire mesh. The pretty Easter arrangement is created with a self-cast Easter egg made of cast concrete.

Easter egg made of cast concrete

For the concrete egg, concrete mass is first mixed with water according to the product instructions and then filled into a 14 cm Acrylic-egg, which was previously sprayed with release agent spray. The creative concrete will be fully hardened after approx. 24 - 30 hours

Casting Design Easter Pendant

With fine white casting slip and the casting mould "Jewellery Pendant" in round, a small white disc in ceramic-look is cast and inscribed with a handlettering message.

Mesh wire bell

Cut approx. 80 x 50 cm. Form it into a bell. Before you bend the wire together in one place, put the wire decoration on the metal plate as a test. This way you can quickly see if the bell is shaped in the right size, the wire is evenly rounded.

In addition, for this idea you need a tree disc, some decorative wicker, moss, early flowering plants, a decorative plate, Jute ribbon, but above all wire mesh.

Arrange the cast Easter egg together with the decorative wicker and the other floristic accessories on the tree disc, fix everything with hot glue. Already now you have a pretty Easter decoration at your disposal. But to make your **arrangement** an extraordinary highlight, simply place it on a metal plate and place it under the wire mesh bell .

The little **Easter pendant** is put around the bell with a string, then a Jute ribbon is tied **around the** wire to a nice bow. Cut the wire at the upper edge and give the loop the right length.

According to your personal taste you can decorate further with small decorative eggs and Feathers - ready is your new eye-catcher!

Must Have

Mesh wire, mesh size 14x14 mm

Length: 5 m
Width: 50 cm
Material: Wire

489,99 Kč (1 m2 = 196,00 Kč)
